

“How To....” Guide for your Flat White Website

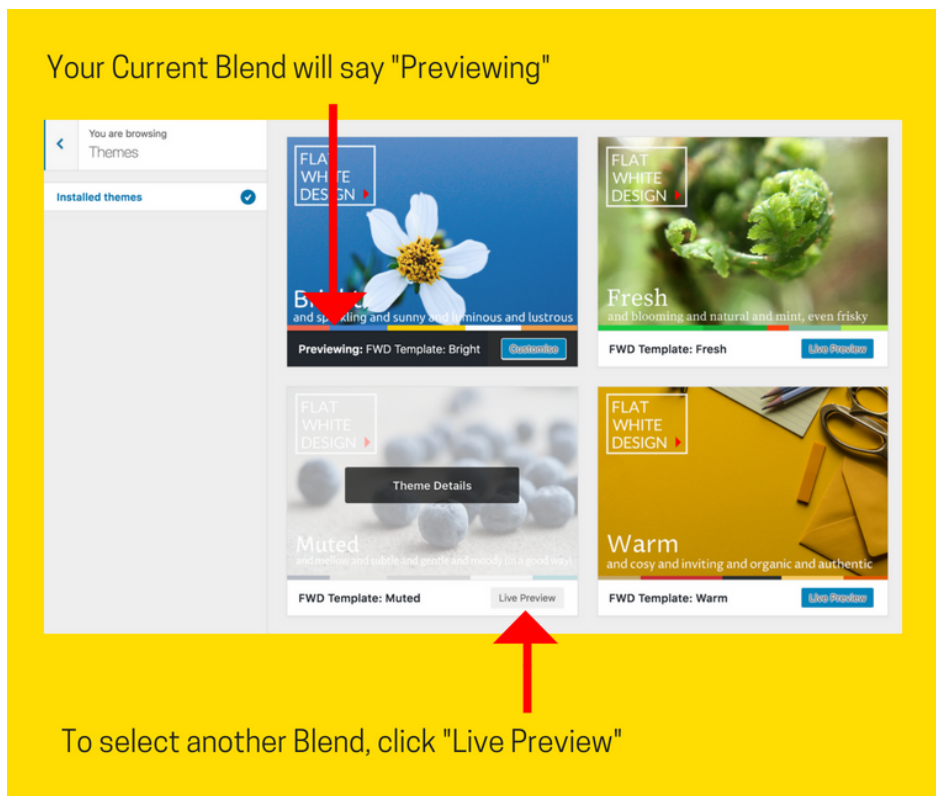

How to Change your Blend

You can change the Blend of your website really easily, without losing any of your content. This will change the options you have for colours and typography, but the layout will stay the same.

Click on “Change” within the Active Theme box, and other options will appear.

Click on “Live Preview” to select another Blend. You will then preview this new Blend within Customizer. If you are happy to change, remember to click “Publish”.
