

“How To....” Guide for your Flat White Website

How to edit Colours

Each Blend for a Flat White Website has a carefully curated choice of colours that work together. Sometimes it can be overwhelming to select a good combination of colours, but you can feel confident that any combinations you choose from you Blend will work together, with just enough choice to make your website work for your brand.

The examples shown here are based on the Bright Theme, and will vary with different themes.

Site Title Colour

This needs to show up well on your Hero Image.

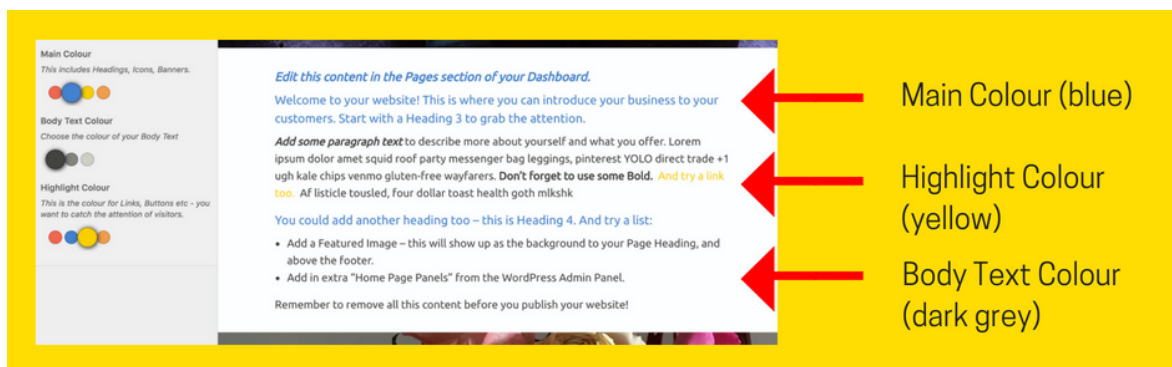

Main, Body Text and Highlight Colours

This is your main colour identity for your website. It will dictate the colours of all the Headings and the backgrounds.

The Highlight Colour is for links and buttons – choose a colour that catches the eye amongst the main text.

The Body Text Colour is for your main text.

Remember that it is really easy to change Blends at any stage, without losing content, if you want a different range of colours.

Saving your Changes

Whenever you have make any changes in any section of the Customizer, always remember to click “Publish” – otherwise your changes will be lost!
