

# “How To....” Guide for your Flat White Website

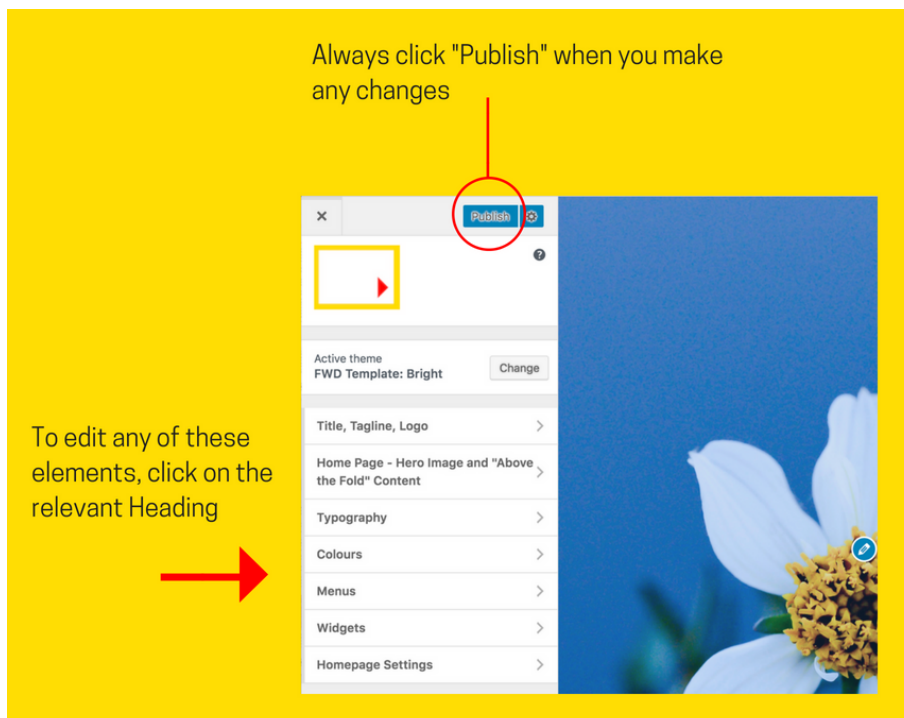

## Introduction to the Customizer

The best place to start editing your website is in the Customizer. This is a built-in WordPress resource, which we have adapted to make it as simple as possible to edit some of the most important elements of your website.

Go to your Dashboard, and click on Customizer:

In the Customizer Panel, you will see lots of options listed. Click on any of these to find out more about the changes you can make.

The most useful options for you to edit here are:

- **Title, Tagline and Logo**
- **Home Page**
- **Typography**
- **Colours**

Although you can edit your **Menus and Widgets** within the Customizer, we recommend doing this via the main Dashboard.

**Homepage Settings** is a built-in WordPress option – we have set these up for you, so you won't need to edit these.

## **Saving your Changes**

Whenever you have make any changes in any section of the Customizer, always remember to click “Publish” – otherwise your changes will be lost!
